

Securly- Web Filtering and Device Management

Lincoln County Schools is implementing a new technology service called Securly.

Securly will provide web filtering, mobile device management, classroom management tools, and monitoring tools for parents and staff on all devices that use Chrome and Chromebooks.

Features:

- **Install/Use-** Securly will be installed remotely on any Chrome or ChromeOS system when a student or staff member logs in with their LCS user account. This software is user based. Therefore, it will not work under parent logins, home logins, or other usernames and passwords on non-school devices. *(All LCS devices only allow LCS student and staff logins. Securly will deploy to these devices.)*
- **Web filtering-** Securly will filter and monitor Internet usage based upon the restrictions of the district or school, in compliance with federal requirements. However, parents will have access to a parental control application that will allow them to set more restrictive time limits and filters when students are using their accounts at home. *(Parent app to be distributed this summer.)*
- **Classroom management tools-** Securly will provide teachers with remote presentation and viewing capabilities during school hours. *(These features will not be available outside of scheduled class time.)* The district will be providing staff development and training for these features in the coming months.
- **Monitoring-** Securly will provide parents with the ability to monitor web activity and usage for their students via the mobile app that will be distributed this summer.
